Data Analyst | Business Analyst | SQL, Reporting & Reconciliation

Summary

Data and business analyst with hands-on work in revenue reporting, billing and reconciliation. Finds out why two numbers don't match, fixes the cause, and automates the report so it stays right. Works in SQL, Python and Excel every day.

Professional Experience

- **AdElement Media** — Pune, Maharashtra
  Data Analyst — *July 2025 – Oct 2026*
  - Grew a **$2.6M+ annual revenue portfolio** of 15 partner accounts by **32% YoY** and scaled two new accounts about 10x
  - Ran **company-wide monthly billing** for 55+ revenue lines in 10+ entities, cutting month-end close from **14 to 3–4 days**
  - Reconciled **100K+ records a month** between our data and partner reports in SQL (Redshift, AWS Athena, MySQL), fixing time-zone mismatches and flagging every gap above 5%
  - Found a **bug in the revenue-change formula** that misreported results for all 70+ demand partners; fixed it, ran user acceptance testing (UAT) against source data, and had it confirmed by the data team head
  - Automated **daily performance reports** for 10+ accounts through a SQL, Python and Excel (Power Query, VBA) pipeline, saving **7–8 hours a week**, and built 3 Metabase dashboards the team used daily
  - Cut a key SQL query from **10–15 minutes to 3–4** by filtering early instead of scanning full tables, on TB-scale daily logs in AWS Athena and Redshift
  - Connected **Claude to internal databases through MCP** (read-only, company-approved), saving **2–3 hours a day** on pulling and checking data, with every answer verified against source
  - Presented monthly revenue reports to the **CEO, COO and founder** and parent-company executives, and turned around 3+ ad-hoc analysis requests a week within 2–3 hours
- **Datawrkz** — Bengaluru, Karnataka
  Ad Operations Analyst Intern — *Mar 2025 – Jun 2025*
  - Built daily pacing reports in Excel for 8 campaigns (**£160K budget**) from platform APIs, keeping spend within 95–105% of plan; automated reporting through APIs and Looker, cutting **turnaround 35%**
  - Lifted **conversions 15–23%** (sign-ups, booked calls) for 8+ real-estate clients via segmentation and A/B testing

Projects

- **Tallyline: Ad Exchange Analytics Workspace** — Live demo | GitHub
  Python, SQL, DuckDB, FastAPI, pytest — *2026*
  - Built an analytics workspace for a simulated ad marketplace: KPIs, a full bid funnel, six drill-down levels and printable reports, on a DuckDB star schema behind a read-only FastAPI
  - Wrote an **anomaly detector in SQL** that compares each hour with the same hour in past weeks; it caught **100% of planted incidents** at 94–100% precision across 3 simulated datasets
  - Added **31 automated tests**, including checks that every breakdown adds back up to the total
- **Credit Risk & Loan Default Analytics** — Tableau | GitHub
  Snowflake SQL, Python, Scikit-learn, XGBoost, Tableau — *2026*
  - Analyzed **150K+ loan records** in Snowflake SQL (CTEs, window functions, cohorts): borrowers with high card utilization and past late payments defaulted at 48%, against 3% for low-risk borrowers
  - Compared logistic regression and XGBoost (test AUC 0.86 and 0.87) and turned the scores into a lending rule: declining the riskiest 20% catches **73% of defaulters**; shared in two Tableau dashboards
- **Movie Recommender on Databricks** — Notebooks | GitHub
  PySpark, Spark MLlib (ALS), Databricks, NumPy — *2026*
  - Built a **Spark ALS recommender** and scaled it from 100K to **25M ratings**; it beat a popularity baseline by **94% on NDCG@10**, tested on what each user watched next
  - Measured how it scales on serverless Spark: **100x more data took 8.3x longer** to train (41 s to 339 s)

Skills

- **SQL & Python**: SQL (Joins, CTEs, Window Functions, Query Optimization; MySQL, Redshift, AWS Athena, Snowflake, DuckDB), Python (Pandas, NumPy, Scikit-learn), PySpark, Databricks
- **Analysis**: Data Quality, Reconciliation & Validation, Root Cause Analysis, Variance & Cohort Analysis, KPI Monitoring, A/B Testing, Anomaly Detection, Forecasting, Statistical Modeling (Logistic Regression, XGBoost)
- **BI & Reporting**: Power BI (DAX), Tableau, Looker, Metabase, KPI Dashboards, Excel (Power Query, Pivot Tables, XLOOKUP, VBA/Macros), Google Sheets, PowerPoint
- **Business & AI**: Requirements Gathering, Jira, User Acceptance Testing (UAT), Stakeholder Management, Cross-functional Communication, Executive Presentations; Git, AWS; AI Tools (Claude via MCP, Claude Code, ChatGPT)

Education

- **National Institute of Technology, Silchar** — Assam, India
  B.Tech in Civil Engineering, CGPA 8.24 — *2021 – 2025*

Certifications & Leadership

- **Certifications**: Data Visualization with Power BI (Great Learning, 2024); Data Analysis using Microsoft Excel (Coursera, 2024)
- **General Secretary, NITSMUN (2024–25)**: Led 8+ Model UN conferences and grew participation 70%
- **Executive Head, E-Cell (2023–24)**: Ran 10 workshops and 5 mentorship programs for a campus of 8,000+ students
