Data Analyst | SQL, Python & Excel | Reporting & Reconciliation

Summary

Data analyst who works from raw tables to the decision: writing SQL against large daily logs, cleaning the output in Python and Excel, and turning it into dashboards and reports people check every day. Most at home when two sources disagree and someone has to find out why. Uses GenAI tools to move faster, validating every output against source data.

Professional Experience

- **AdElement Media** — Pune, Maharashtra
  Data Analyst — *July 2025 – Present*
  - Reconciled **100K+ records monthly** between internal and partner data in SQL (Redshift, AWS Athena, MySQL), aligning EST/UTC reporting days and flagging variances above 5%
  - Cut key SQL query run time from **10–15 to 3–4 minutes** by filtering early instead of scanning full tables, on TB-scale daily ad-request logs in AWS Athena and Redshift
  - Automated **daily performance and account-health reports** for 10+ accounts with SQL, Python, and Excel (Power Query, VBA), saving **7–8 hours** weekly
  - Built **3 Metabase dashboards** on a 10-minute refresh — demand and supply health, per-account revenue, ads.txt and bundle validation — used daily by the team
  - A/B tested two supply versions and cut floors in low-demand periods, holding **revenue per million requests above $2**
  - Caught a **systematic error in revenue-variance logic** (reversed and capped at ±100%) misreporting changes for every demand partner; fixed it and ran user acceptance testing (UAT) against source data, confirmed by the data team head
  - Connected **GenAI (Claude) to internal databases via MCP** with read-only, company-approved access, saving **2–3 hours daily** on data extraction and checks, with every output validated
  - Manage a **$2.6M+ annual revenue portfolio** of 15 partner accounts, growing portfolio revenue **32% YoY** and scaling two newly launched accounts about 10x through data-led optimization
- **Datawrkz** — Bengaluru, Karnataka
  Ad Operations Analyst Intern — *Mar 2025 – Jun 2025*
  - Built daily pacing reports for 8 campaigns (**£160K budget**) in advanced Excel from platform APIs and UIs, keeping pacing within 95–105% of plan; automated reporting via APIs and Looker, cutting **turnaround by 35%**
  - Lifted **conversions 15–23%** (sign-ups, booked calls) for 8+ real-estate clients via audience segmentation and A/B testing

Projects

- **Credit Risk & Loan Default Analytics** — Link
  Python, SQL, Snowflake, Tableau, Scikit-learn, XGBoost — *2026*
  - Cleaned and analyzed **150K+ loan records** in Snowflake SQL (window functions, cohort analysis) to isolate default drivers — revolving utilization plus prior delinquency drove a 48% default rate vs. 3% for low-risk borrowers
  - Benchmarked logistic regression and XGBoost models (test AUC 0.86 / 0.87) and turned scores into a lending policy that catches **73% of defaulters** by declining the riskiest 20%; built two Tableau dashboards for non-technical stakeholders
- **Expense Analytics & Anomaly Detection** — Link
  Python, Isolation Forest, KMeans, ARIMA, Plotly — *2025*
  - Flagged anomalous transactions with Isolation Forest, segmented spending patterns with KMeans, and forecast trends with ARIMA, presenting results as dashboards with recommendations
- **Student Performance Analysis Dashboard** — Link
  Power BI, DAX, SQL, ETL — *2024*
  - Cleansed and transformed **150K+ raw institutional records** through SQL/ETL into a Power BI reporting suite with DAX models, helping administrators identify at-risk students

Skills

- **SQL & Python**: SQL (Joins, CTEs, Window Functions, Query Optimization — MySQL, Redshift, AWS Athena, Snowflake), Python (Pandas, NumPy, Scikit-learn), ETL Automation
- **Analysis**: Data Reconciliation & Validation, Cohort & Variance Analysis, A/B Testing, Anomaly Detection, Forecasting (ARIMA), Logistic Regression, XGBoost
- **BI & Reporting**: Power BI (DAX), Tableau, Looker, Metabase, KPI Dashboards, Microsoft Excel (Power Query, Pivot Tables, VLOOKUP/XLOOKUP, VBA), Google Sheets, PowerPoint
- **Tools & AI**: Jira, Git, AWS, DB Gate; GenAI (Claude via MCP, ChatGPT) with Output Validation

Education

- **National Institute of Technology, Silchar** — Assam, India
  Bachelor of Technology – Civil Engineering; CGPA: 8.24 — *2021 – 2025*

Certifications & Leadership

- **Data Visualization with Power BI**: Power BI, Data Modeling, Visual Analytics — Sep 2024 (Link)
- **Generative AI for Executives and Business Leaders**: Jun 2024 (Credential ID 7274GMGAN88F)
- **Introduction to Data Analysis using Microsoft Excel**: Excel, Data Analysis — Mar 2024 (Coursera)
- **General Secretary, NITSMUN**: Led 8+ conferences, grew participation 70%, and secured Rs 30,000 in sponsorships (2024–25)
- **Executive Head, E-Cell, NIT Silchar**: Ran 10 workshops and 5 mentorship programs; negotiated Rs 1,00,000 in sponsorships across 8,000+ students (2023–2024)
